

VALENTINA SOLE

SUMMARY

I am a Data & AI engineer with a biomedical engineering degree who started on the operations side. After more than a year running AI deployments for clients at Darwin AI, I moved to the Data & AI team, where I build and operate the platform the company runs on: Dagster pipelines, dbt models on Snowflake, reverse ETL to HubSpot and LLM-based internal tooling. I bring the rigor of a field where data integrity and validation are non-negotiable, and the client-side experience to model what teams actually need.

WORK EXPERIENCE

Data & AI Engineer - Darwin AI

Jul 2026 - Present

- Developed and maintained Darwin's data platform: self-hosted Dagster (OSS) on AWS (Docker Compose on EC2, RDS Postgres) orchestrating a 400+ model dbt project over 38 sources on Snowflake, with scheduled jobs, run-status sensors and Slack alerting.
- Designed and shipped dbt models end to end (staging → facts, dimensions, marts) with data quality tests, docs, snapshots, incremental models and seeds.
- Built the customer effort score end to end: a dbt model ranking 12 normalized signals per account, snapshots for weekly history, reverse ETL into HubSpot and an MCP tool exposing it to AI agents, so Operations sees per-account and per-executive workload.
- Split ingestions into S3-export and Snowflake-load assets; automated publishing of dbt manifest/catalog to S3 for downstream AI consumers (SQL MCP server, data-analyst agent), with pytest coverage.
- Hardened reverse ETL (per-destination assets, retries with exponential backoff, aggregated failure alerts) and shipped Slack alert assets for executives (line quality, onboarding, usage decline) plus a weekly adoption leaderboard.
- Built and maintained internal AI agents, skills and MCP tools (LLM-based tooling) adopted by the Operations, Sales and Finance teams, including MCP tools exposing warehouse metrics to agents.
- Developed analytics and Metabase dashboards on Snowflake covering usage, adoption and revenue, supporting account and leadership decisions.

AI Operations Lead - Darwin AI

Aug 2025 - Jul 2026

- Promoted to AI Operations Lead for outstanding performance in client management and process optimization, leading a team of 10+ people in Operations.
- Owned a portfolio of client accounts end to end (onboarding, adoption and retention of deployed AI agents) as main point of contact, running weekly health checks and business reviews and flagging churn-risk signals early.
- Ensured accuracy and consistency of client data through validation protocols, quality controls and performance dashboards; monitored KPIs and reported findings to leadership with corrective actions.
- Collaborated with Product and Customer Success to optimize internal workflows and the client experience.
- Fostered a culture of continuous improvement, mentorship and effective communication across the team.

AI Operations Executive - Darwin AI

Mar 2025 - Aug 2025

- Conducted audits on client implementation data to verify consistency and model performance.
- Collaborated with the technical team to validate new functionalities before deployment, documenting test outcomes.
- Provided technical support to clients on the AI build.

Operations Intern - Amcor Rigid Packaging

May 2024 - Nov 2024

- Designed validation scripts and dashboards to identify and correct data inconsistencies in production metrics.
- Supported quality control initiatives by monitoring process deviations and documenting corrective measures.

Digitization of the UCIP (pediatric ICU) room pass - Hospital Universitario Austral

Jul 2023 - Dec 2023

- Collaborated with clinical staff to ensure data accuracy during the digitization of patient room processes.
- Validated backend data integrity and compliance with hospital information standards.

EDUCATION

Degree in Biomedical Engineering

Jan 2021 - Dec 2025

Universidad Austral, Buenos Aires. Thesis: hypoxia markers vs PD-L1 expression in TCGA lung cancer cohorts (LUAD/LUSC), in R.

ADDITIONAL INFORMATION

- **Data Engineering:** Dagster (assets, jobs, schedules, sensors), dbt (dimensional modeling, incremental models, snapshots, data quality tests, docs), ELT pipelines, Snowflake, PostgreSQL, SQL, Python (pandas), AWS (S3, EC2, RDS), Docker, Git/GitHub, pytest.
- **Analytics & AI Tooling:** Metabase, KPI and dashboard design, HubSpot data model and API, Slack API, PostHog, LLM agents and MCP servers (Claude), prompt evaluation.
- **Programming & ML:** Python, R, Java, MongoDB; Machine Learning (classification, neural networks, feature extraction), TensorFlow, OpenCV, Biomedical Image Processing, Computational Modeling, Statistical Analysis (pandas, NumPy, SciPy).
- **Certifications & Courses:** dbt Fundamentals (dbt Labs, 2026); Dagster Essentials, Dagster & ETL, Dagster & dbt (Dagster Labs, 2026); Database Design and Basic SQL in PostgreSQL (University of Michigan via Coursera, 2026); Deep Learning: Neural Networks from Scratch (UTN FRBA, 2025); Cambridge First Certificate (FCE).
- **Languages:** Spanish (Native), English (Full professional proficiency), Italian (elementary proficiency).

Location: Buenos Aires, Argentina **Phone:** +54-911-4181-1033 **Email:** valentinasole3@gmail.com

LinkedIn: linkedin.com/in/valentinasole **GitHub:** github.com/valentinasole1
